

Water-Proof Remover

Product Information

Product Description

Adhesive Remover is a specially formulated water based cleaner designed to clean Aquaflex adhesive from the surface of flooring. This special formulation is the only cleaner we recommend for removal due to its low reactivity and low solvent content.

Adhesive Remover is non-flammable and safe to use on VCT, LVT and even wood flooring. This product functions to penetrate Aquaflex turning it temporarily soft for easy removal.

Once the remover dries, the glue will reconstitute its tack. This feature allows for topical applications to flooring without fear of liquefying glue residues that may harm future installations.

This product is NOT recommended as a preparation technique for concrete substrate with residual adhesive. Only mechanical means should be employed for removal of old carpet adhesive. For "cut-back" see the guide published by the Resilient Flooring Institute for proper mitigation.

Application

Caution: Wear chemically resistant gloves. This product will dry skin and may lead to irritation.

- Pour a suitable amount of remover on to supplied sponge.
- Remove glue globs with a plastic putty knife.
- Using a circular motion apply product to dry adhesive skim.
- Repeat if necessary.
- Discard softened glue in suitable container.
- After removal, wipe area with a dampened towel and allow to air dry.

Note: For large glue globs, scrape the largest portion off prior to application of remover.

Note: Do not use an excessive amount of water for clean-up. Water can penetrate flooring and may cause installation problems.

Formulators will not be responsible for improper use of remover.

Chemical & Physical Properties

Base:	Surfactant
Vehicle:	Water
Color:	Amber
Solids:	>40%
pH:	12
Density:	8.2lbs/gal
Flammability:	Nonflammable
Consistency:	Liquid
Shelf Life:	One Year*

*From date of manufacture and stored in original, sealed container

Care & Storage

This product should always be stored in the original container and in a cool, dry place. Do not use remover on painted surfaces. Remover is harmful if swallowed. Do not transfer and store in spray bottles. Remover can soften plastic.

Please keep out of reach of children.
